About the Programmer

Safeguarding and maintaining health & safety in the workplace is an important prerequisite for motivated and productive working processes, both for employers and employees. The new ISO 45001 standard for occupational health & safety management will supersede OHSAS 18001, the previous standard for occupational health & safety, and will minimize the risk of damage to health and accidents in the workplace. BS OHSAS 18001 was developed by the British Standards Institution (BSI) and forms the basis for the new ISO 45001 standard. The 'Project Committee PC 283' of the International Organization for Standardization (ISO) received a proposal from the BSI in March 2013 for the new international standard, which was now published on 12th March 2018.

The new standard focuses on preventative employee protection and greater involvement from the management team. The structure of the standard permits simple integration into previously implemented management systems and the standard can be utilized regardless of the size of the company.

About Faculty

Shri R. Kumar, Management System Consultant, 3i Quality Consultants
